

Ghattan Firstian Ilhaq

UI/UX Designer & Website Developer

0838-1476-4614 | ghattanilhaq@gmail.com | ghattanIT@gmail.com | Metland Transyogi, Cileungsi, Bogor

Profil

A UI/UX designer and programmer with experience in managing projects related to digital technology. Highly disciplined and responsible when working independently, with a strong ability to adapt to new environments. Has extensive hands-on experience in the field, with a strong passion for continuous learning and improving technical as well as problem-solving skills.

Key Skills

- Responsible
- Disciplined
- Consistent
- Analytical Thinking
- Time Management
- Work Under Pressure
- Problem Solving
- Project Planning
- UI/UX Design
- Front-end Developer
- Back-end Developer
- User Research

Experience & Achievements

1st Place – UI/UX Competition, Trilogi University

29 April, 2025

Designed a modern school website emphasizing clean visual design, intuitive navigation, and responsive user experience. Conducted basic user analysis and translated insights into structured user flows, wireframes, and interface layouts to ensure both functionality and aesthetic consistency.

2nd Place – UI/UX Competition, Universitas Jenderal Achmad

29 June, 2025

Yani Yogyakarta

Developed an inclusive digital interface by applying accessibility principles such as clear information hierarchy, readable typography, and simple navigation. Focused on creating a user-friendly experience that accommodates diverse users, including those with varying levels of digital familiarity.

3rd Place – Website Development Competition, Metland School

05 March, 2026

Built a school profile website with well-structured content, engaging UI, and responsive design. Organized information effectively to highlight key features such as programs and achievements, while ensuring smooth navigation and consistent user experience across devices.

3rd Place – Mathematics Competition, Metland School

29 January, 2026

Demonstrated strong analytical thinking and problem-solving abilities through high-speed calculations and pattern recognition. Maintained accuracy and focus while solving complex problems under strict time constraints in a competitive environment.

1st Place – Logical Mathematical Intelligence

15 November, 2025

Participated in a UI/UX competition focused on the digitalization of UMKM (small and medium enterprises). Designed user-centered solutions to help improve business visibility and usability in digital platforms, applying design thinking, wireframing, and rapid prototyping under time constraints.

Participant – UI/UX Competition, Trisakti University

01 November, 2025

Participated in a UI/UX competition focused on the digitalization of UMKM (small and medium enterprises). Designed user-centered solutions to help improve business visibility and usability in digital platforms, applying design thinking, wireframing, and rapid prototyping under time constraints.

Participant – UI/UX Competition, UIN Sunan Gunung Djati

04 December, 2025

Participated in a UI/UX competition focused on sustainable development through technology. Developed user-centered design solutions that emphasize usability, efficiency, and digital sustainability, while applying UX fundamentals such as user flow, layout structuring, and interface clarity.

Web-Based Hotel Pillo Booking System

03 October, 2025

Developed a full-stack hotel management website using React for the front-end and Laravel with MySQL for the back-end. Implemented features for data management, user interaction, and system efficiency, ensuring a responsive interface and structured database handling.

SMK Metland Integrated Learning Entrepreneurship

23 December, 2025

Developed a full-stack web platform for managing school-based UMKM (entrepreneurship programs) at SMK Metland. Utilized TypeScript and React for building a responsive and intuitive front-end, and Laravel for robust back-end development and data management. Designed and implemented features for product listing, transaction/data handling, and business monitoring, focusing on usability, scalability, and efficient system performance.

Automatic Bell IoT System

12 November, 2025

Developed an IoT-based automatic bell system integrated with an admin control panel. Utilized ESP32 for hardware control, with a web-based interface built using JavaScript and Bootstrap, and Laravel for back-end management and scheduling functionality.

Organization

Served as a member of the ITEC organization, contributing in digital marketing and UI/UX division. Responsible for delivering training sessions and mentoring junior students in UI/UX design, including sharing fundamental concepts, design tools, and practical skills.

Education

-
- | | |
|---------------------------------|-------------|
| • SDN 01 Cileungsi | 2015 – 2021 |
| • SMPN 01 Gunungputri | 2021 – 2024 |
| • SMK Pariwisata Metland School | 2024 - 2027 |
